

FEATURED ALUM-A-LIFT  
EXPLOSION PROOF ATEX/EX FUNNEL INSTALLATION LIFT

PROJECT  
**27478**

**MODEL** A800CSIS-114

**FEATURING** Notched fork set with guides, low profile base and full pneumatic operation

**HANDLING** 110 lb [50 kg] stainless steel funnel

**DETAILS** This lift is used to install stainless steel funnels onto a mixer in an ATEX Zone 21, Category 2 hazardous environment. Its intrinsically safe pneumatic lifting drive uses a factory compressed air supply instead of the typical electrical system to eliminate the risk of ignition. The non-sparking aluminum lift chassis and base is optimal for ATEX environments with stainless steel construction being an available alternative. Alum-a-Lift features such as the clean efficient ball screw and fail-safe brake are maintained. For environments with a less rigorous designation, the same lift can be configured with a sealed version of our standard electrical system.
