

FEATURED ALUM-A-LIFT AIRCRAFT ENGINE SHAFT HEAT TREAT OVEN LOADER

PROJECT 27527

MODEL C1500CSLRPD-96

FEATURING Wide-spaced powered clamp, powered rotation module, lateral shuttle, overload safety device, and steerable powered drive wheel

HANDLING 770 lb [350 kg] engine shafts

DETAILS Oven enclosures often do not accommodate overhead loading, and provide little space for floor-bound legs to pass underneath. This self-propelled material handling system picks shafts from a storage cart, rotates them to a vertical orientation, and reaches forward beyond its footprint, allowing a single operator to safely and precisely handle high value aerospace components.
