

FEATURED ALUM-A-LIFT ROLL LIFTER WITH POWERED PUSHER EJECTOR

PROJECT 28333

MODEL A800CSLR-60

FEATURING Powered Roll Ejector, Coated Linear Rails, Quick Exchange Batteries, Heavy Duty Pendant Controls

HANDLING 550 lb [250 kg] Rolls

DETAILS Absorbent, hygienic products for the medical industry are typically made from layers of woven and nonwoven fibers. These fiber sheets begin on large rolls often weighing over 500lbs. Alum-a-lift provides a system that allows the operator to spear and raise heavy rolls. After docking with the machine spindle, the powered ejector loads the rolls onto the unwinder without requiring the operators to push them by hand.
