

FEATURED ALUM-A-LIFT SEMICONDUCTOR WORKSTATION AND POSITIONER

PROJECT 28717

MODEL A1500CRSLR-72

FEATURING Bolt-on adaptor blocks, fixed fork set, super-duty rotation module, class 1000 cleanroom compatibility

HANDLING 1000 lb [450 kg] Assemblies

DETAILS A semiconductor fabricator needed a mobile workstation to securely hold their equipment during assembly in their clean room. Specially shaped adaptor blocks were designed to bolt to the sides of the equipment's frame while providing clearance for technicians to add components. A rotation module allows 360-degree rotation for ergonomic access to all sides of the assembly. This lift features a wide base which allows it to seamlessly interface with another lift and two carts, also made by Alum-a-Lift. This complete system eliminates risky handling, increasing safety for operators and equipment.
