

FEATURED ALUM-A-LIFT ERGONOMIC LIFTING DEVICE WITH POWERED SPOOL GRIPPER

PROJECT 30249

MODEL A800CS-60

FEATURING Powered Gripper, Powered Rotation Module, Spring Overload Safety Device, Rubber Alignment Pads

HANDLING 200 lb [91 kg] Steel Spools

DETAILS This Alum-a-Lift was designed to retrieve large, steel spools from a storage cart and rotate them for loading into process equipment. Its powered gripper engages the spool from the inside of its core. Plastic alignment pads ensure that the gripper is positioned properly when approaching a spool. Push-button controls make spool rotation effortless. This lift gave operators confidence to quickly and safely move the large, heavy spools.
