

FEATURED ALUM-A-LIFT  
STAINLESS STEEL MIXER MOTOR INSTALLATION LIFT

PROJECT  
**29415**

**MODEL** Custom Floor Jack

**FEATURING** Two-axis positioning head, Interchangeable Motor Brackets, Removable Push Handle

**HANDLING** 110 lb [50 kg] Stainless Steel Mixer Motors

**DETAILS** Serviceable components such as pumps and motors for large pharmaceutical mixers can often be in hard-to-reach locations, such as high on mezzanines or under large tanks. The addition of sanitary washdown requirements means off-the-shelf lifting solutions may not exist. This compact, useful material handling device is the result of an on-site engineering effort where an Alum-a-Lift project engineer gathered information and discussed goals and requirements directly with end users and other stakeholders.
