

FEATURED ALUM-A-LIFT
 TEST CHAMBER LOADING LIFT WITH SIDE SHIFT PLATFORM

PROJECT
30509

MODEL A800CLR-60

FEATURING ESD UHMW-lined platform, 20-inch unidirectional lateral shuttle, asymmetrical base and counterweight

HANDLING 50 lb [23 kg] Electronics Chassis

DETAILS A defense contractor needed to load high-value electronics chassis into a test chamber through a narrow opening. This lift features a platform to support the chassis and a low-friction ESD liner to prevent damage to the components. The platform extends 20 inches in one direction to place the unit inside the test chamber. The lift's frame is offset to one side of the base to allow the lift to be positioned as close to the opening as possible, and countermass on the opposite side of the base provides stability.
