

FEATURED ALUM-A-LIFT ROLL LIFTER AND TRANSPORTER WITH V-TROUGH

PROJECT 31555

MODEL B350CS-84

FEATURING Non Marking V-Trough, Extended Reach Supports, Motor Speed Control

HANDLING 100 lb [45kg] Rolls

DETAILS Thru shaft racks are a common storage solution for large fabric rolls. These racks are often packed tightly and have low positions that make removal and loading difficult and unergonomic. The crowded space in fabric warehouses lend the application to a lift with a small footprint, and four swiveling casters make the lift easily maneuverable in tight corners. The trough's unique supports allow the lift to reach underneath the lowest loading position and beyond the legs without the need for counter mass to be added.
