

FEATURED ALUM-A-LIFT TOOL AND DIE LIFTER WITH ROTATING GRIPPER

PROJECT 31270

MODEL B350CS-72

FEATURING Manual 360° Rotation, Manual Gripper with Torque Wrench Interface

HANDLING 120 lb [55KG] Tooling

DETAILS A tool and die department at an aerospace facility required their tooling to be changed and inspected several times a week. These cylindrical components can weigh up to 120lb, and must be rotated for inspection which is unergonomic and dangerous for the operators. This lift allows one to use a torque wrench at a preset value to secure the gripper on the tool handle before lifting. With the CG very close to the axis of rotation, and a long lever arm the rotation for inspection is nearly effortless. The rotation can be locked into multiple positions for inspection keeping both tools and toes safe!
