

FEATURED ALUM-A-LIFT
CASINO PLATFORM LIFT FOR SLOT MACHINE TRANSPORT

PROJECT
30189

MODEL A800CS-72

FEATURING Low Profile Platform, Low Friction Liner, Ramp Edge

HANDLING Video Gaming Machines up to 400 lb. [181 kg]

DETAILS Casinos periodically move slot machines to optimize the gaming floor layout and make space for new games. During these changeovers, dozens of machines need to be moved in a short amount of time. This lift offers a low-friction platform that sits just 2" from the floor, and the ramp assists with sliding or rolling machines onto the platform from the floor. This allows operators to quickly load and unload video gaming machines of all kinds, reducing the time needed for floor changeovers while minimizing the strain on operators.
