

FEATURED ALUM-A-LIFT  
 LIGHTWEIGHT LIFTER FOR ROLL AND THROUGH SHAFT

PROJECT  
**32465**

**MODEL** L200CS-90

**FEATURING** Lightweight Construction, Small Footprint, Dual Fork Cradle

**HANDLING** 75lb [34 kg] Roll/Shaft Combinations

**DETAILS** This lift was created for a customer with a packaging line that has little room to spare. The lift was created with a small footprint with the capability to handle smaller rolls mounted on through shafts. The lift can pick roll from the edge of a pallet and raise to an elevated height that would not be possible for an operator without climbing a ladder or step stool. With a single operator the roll is picked and placed without concern for a shoulder injury, or an accident on a ladder and loaded onto the unwinder placed above the conveyor system.
