

FEATURED ALUM-A-LIFT
FAIL-SAFE LIFT AND REPAIR STAND WITH ROTATING CLAMP

PROJECT
33313

MODEL A800CS-72

FEATURING Ancillary Hoist Ring, Manual Handwheel Clamp, Continuous 360° Powered Rotation Module

HANDLING 200 lb [91 kg] Assemblies

DETAILS This lift was built for a producer of pharmaceutical process equipment. Maintenance of this customer's product involves the return of a large bearing assembly to the factory for disassembly and refurbishment. Alum-a-Lift designed this system with a small diameter clamp with a powered rotation module to safely move reworked parts, various test, cleaning, and assembly stations. Some labor steps can even be completed on the ergonomic lift itself, completely eliminating handling and associated risks.
