

FEATURED ALUM-A-LIFT  
 MATERIALS LIFT WITH CLAMP AND LOAD SENSING

PROJECT  
**33769**

**MODEL** B350CS-84

**FEATURING** Clamp with Wrists, Load Sensing and Deadman Brake

**HANDLING** 75 lb. [34 kg] Rolls

**DETAILS** This Alum-a-Lift was designed for a materials manufacturer that needed to transport ceramic pots of hot liquid resin. Custom grips specially designed for their pots, along with powered wrists to empty the resin and 10 foot long pendant cords allow the operator to manage the liquid from a safe distance. The dead man brake automatically keeps the lift in place when the handle is released. Additionally, the load sensing module will stop vertical travel if the lift is overloaded or if an obstacle is encountered.
