

FEATURED ALUM-A-LIFT
 ROTATING INTERFACE PLATE FOR ELECTRONIC ASSEMBLIES LIFT

PROJECT
34289

MODEL L200CS-72

FEATURING Interface Mounting Plate, 360° Rotation, ESD grounded

HANDLING 100 lb [45 kg] Instruments

DETAILS This lift was designed for an electronics manufacturer seeking a material handling solution for lifting and rotating delicate electronic assemblies during production. Functioning as a 2-axis work positioner with a full 360° rotation, this Alum-a-Lift is equipped with a large handwheel, allowing for precise angular positioning and easy handling of eccentric loads. With ESD grounding to prevent damage to electrical components, it also provides extra blank material, allowing the customer to incorporate additional hole patterns for future compatibility and the potential for interface plate swaps.
