## AEROSPACE LIFT WITH BOOM AND FOLDING WORK TRAY

## **33536**

MODEL L200CS-84

FEATURING Low Profile Legs, Boom and Swiveling Hoist Ring

with Obstacle Encounter, Folding Work Tray

**HANDLING** 150 lb [68 kg] Batteries

**DETAILS** 

An aerospace company required a lightweight boom style lift capable of handling battery components from testing cabinets within a tight work environment. The aerospace project engineers specified load capacity, base straddle width, height requirements and more. A folding storable tray was needed for stable transportation and to create a work station for the operators. This simple lift fits the space, picks the load, offers a work station, transports the assembly, and interfaces with the machine as intended making it the safe solution.
