

FEATURED ALUM-A-LIFT
POWERED CLAMP LIFT FOR INSTALLING FEEDER ASSEMBLIES

PROJECT
34071

MODEL A800CLRT-70/56

FEATURING Telescoping Mast, Powered Rotation Module, Powered Clamp, Interchangeable Clamp Pads

HANDLING 200 lb [90 kg] Drums & 46 lb [20 kg] Butterfly Valves

DETAILS This lift was designed for a multinational pharmaceutical company that was looking for a safer process to ergonomically handle the installation of a butterfly valve feeder assembly under a drum/funnel assembly. The lift needed to have a powered 180 degree rotation and reach higher upper limits. Alum-a-Lift offered an all-in-one solution for multiple different sub-components in their assembly with interchangeable clamps to handle all assembly components, an end-effector that facilitates rotations, and a telescoping mast for higher reach while keeping overall height shorter to fit through doorways.
