

**FEATURED ALUM-A-LIFT
ERGONOMIC PLATFORM LIFT FOR CASINO GAMING MACHINES**

**PROJECT
35290**

MODEL A800CS-60

FEATURING Low-Profile Platform, Dual-Start Ball Screw Drive, Motor Speed Controller

HANDLING 500 lb [226 kg] Gaming Machines

DETAILS Casinos periodically move gaming machines during carpet changes and to optimize the gaming floor layout. During these changeovers and renovations, dozens of machines need to be moved in a short amount of time. This ergonomic platform lift offers an increased load capacity of 500 lb, dual-start ball screw drive with motor speed controller and a low-profile platform for easier loading at floor level so operators can quickly load and unload casino gaming machines of all kinds, including floor-bound machines. This casino lift handling solution reduces the strain on operators and minimizes the time needed for floor changeovers.
