

FEATURED ALUM-A-LIFT AIRCRAFT ASSEMBLY WORKSTATION WITH ROTATING FORK SET

PROJECT 35345

MODEL L200CS-60

FEATURING Channel Forkset, Manual Rotation, Floor Brake, Quick-Exchange Battery System

HANDLING 100 lb [45 kg] Assemblies

DETAILS Built for an aviation developer, this aircraft assembly workstation assists in many stages in the manufacturing of aerospace subassemblies by lifting and rotating aerospace components for assembly, inspection, and quality control. The dual channel forkset captivates the assemblies, once in place, locking pins installed through each fork secure the assemblies before lifting. A central floor-brake provides stability and allows the operator to safely rotate assemblies during inspection. The quick-exchange battery system eliminates downtime for charging, affording operators continuous operation.
