

FEATURED ALUM-A-LIFT ADVANCED FILTER HANDLING LIFT WITH DUAL PIVOTING BOOM

PROJECT 35615

MODEL C800CSPD-72

FEATURING Powered Drive Wheel, Dual Pivoting Arm with Pivot Locks, Manual Clamp with Fixed Wrists

HANDLING 120 lb [54 kg] Filter Housings

DETAILS Changing filtration cartridges can be a challenging and labor-intensive process, especially when dealing with heavy or awkward filter housings. Alum-a-Lift's Filter Handling Lift is engineered to streamline your filtration maintenance, ensuring safety, efficiency, and precision at every step.

It eliminates the need for manual lifting, reducing the risk of operator injury and fatigue. The lift's custom end-effectors securely grip filter housings and cartridges, allowing for smooth removal and installation—even in confined or hard-to-reach spaces. With features such as dual pivoting (articulating) arms and manual 360-degree rotation module, operators can easily maneuver cartridges into the perfect position for change-out while on the lift, minimizing downtime and maximizing productivity. Grab the housing, rotate the boom sideways, and simply swap the filter.
