

FEATURED ALUM-A-LIFT HEAVY-DUTY QUAD PRONG LIFT WITH POWERED ROTATION

PROJECT 36251

MODEL A800CS-96

FEATURING Powered 360° Rotation,
Quad Prongset for H-2701 Carts

HANDLING 100 lb [45 kg] H-2701 Carts

DETAILS Handling H-2701 carts—each weighing up to 100 pounds—poses daily ergonomic and safety risks in industrial environments. Manual lifting and rotating can strain workers, cause injuries, and disrupt consistent material flow.

Our heavy-duty quad-prong lift addresses these challenges, enabling operators to lift and rotate carts securely and effortlessly. The quad prongs are specially designed to securely lift H-2701 carts by providing stable, balanced support on all sides. Using four prongs, the lift engages the cart's retaining lips and uses powered rotation to effortlessly and precisely dump its contents, preventing spills and operator strain during material handling.

The result: safer operations, improved efficiency, and reliable material handling with minimal manual effort.
